Accessibility Statement

At Appical, we believe everyone should be able to use our platform, regardless of their abilities or the technology they use. We are committed to providing an accessible and inclusive experience for all users.

Accessibility status

The Appical web application conforms to **WCAG 2.2 Level AA** within the evaluated scope. An independent accessibility evaluation confirms the platform meets all applicable success criteria, and its formal accessibility status is conformant.

Appical remains committed to maintaining and improving the accessibility of the platform as part of ongoing product development.

Customer-created content

Appical enables organisations to create and manage their own onboarding and learning experiences.

Appical provides tools to support the creation of accessible content. As customers create and manage their own content, accessibility also depends on their content and design choices.

We encourage all content creators to follow accessibility best practices, including providing alternative text for images, using sufficient colour contrast and making learning materials accessible to everyone.

Technical information

The Appical web application relies on the following technologies:

- HTML
- CSS
- JavaScript
- WAI-ARIA

The application is designed to work with modern browsers and commonly used assistive technologies.

Feedback and contact

We welcome feedback and are always looking for ways to improve.
If you experience accessibility difficulties while using Appical, or need assistance accessing content, please contact us at:

Email: info+accessibility@appical.nl

We aim to respond within five working days.

Assessment and evaluation

The accessibility of the Appical web application has been independently assessed by https://www.bureautoegankelijkheid.nl/ using the WCAG Evaluation Methodology (WCAG-EM).

The evaluation covers the Appical web application at: https://webplayer.appicalnow.com/

The assessment is based on a representative sample of pages, components and user interactions. The native iOS and Android applications and the Editor environment are not included in this assessment.

The latest evaluation was completed on 9 November 2026.

We regularly review our accessibility efforts and will update this statement as further improvements are implemented and verified.
